

Deliver virtual care

# iConsult Bedside

Powered by  caregility

For many organizations, patient care depends on physical presence in the hospital room. Nurse call bells are the only form of communication. If remote communication is required – with a remote physician, or a remote interpreter – video equipment must be located and pulled into the room. And with the COVID-19 pandemic, the need for video to deliver quality inpatient care is clear.

iConsult, powered by Caregility, enables Oneview customers to benefit from secure, reliable and always available video infrastructure at the bedside. Unlike other video platforms, iConsult is purpose-built for the healthcare enterprise and the needs of clinicians and patients. Deployed on Oneview's touchscreen devices, iConsult enables virtual rounding, virtual visitation with family and friends and virtual consults.

## BENEFITS

### Secure and easy to use

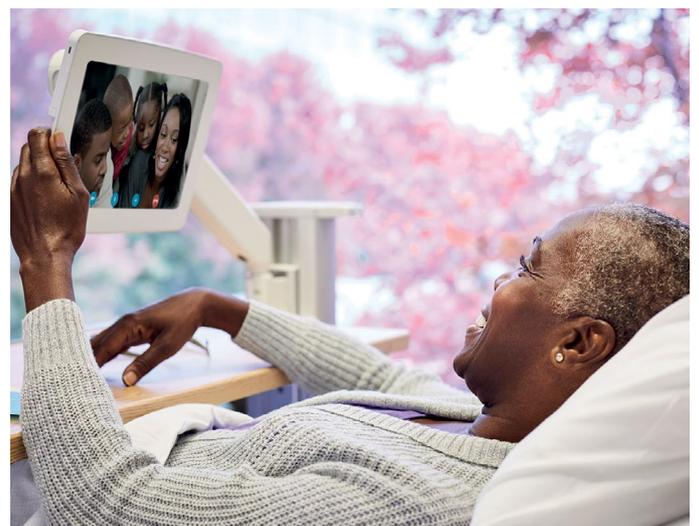

Because iConsult is delivered on Oneview always-on touchscreens, is designed for inpatient use cases and is HIPAA-compliant, you can rely on it for mission-critical care workflows.

### A better experience for patients & families

iConsult connects patients to remote clinicians for virtual rounding and virtual consults, and to remote family members for virtual visitation, for a better experience. No meeting IDs or passwords required or apps to install. Just simple, secure connectivity.

### Start simple in days and scale

Cloud-hosted, and deployed on Oneview tablets, existing clinician devices and desktops, iConsult is easy to implement within days and doesn't require expensive hardware. And when you're ready, the broader Caregility platform connects across the continuum of care, providing a foundation for enterprise telehealth.

## FEATURES

<b>Device support</b>	iConsult can be accessed by clinicians as an app on Apple and Android smartphones and tablets, and as a web application on desktop and workstations.
<b>Full two-way audio and video</b>	The iConsult solution is delivered on Caregility's UHE platform for high-quality, reliable two-way audio and video.
<b>One-touch calling to patient rooms</b>	Clinicians can search for a room and place a secure video call with one-touch; no meeting IDs or passwords to remember and key in.
<b>Virtual consults from clinician devices and workstations</b>	Clinicians can initiate a call to the patient room from a any smartphone or tablet running the iConsult app, enabling remote workflows including assessments, consults and rounding.
<b>Configurable auto-answer on incoming calls</b>	The solution can be configured to auto-answer incoming calls on the Oneview device, ensuring video connectivity for mission-critical workflows like rounding.
<b>Clinician-to-clinician video</b>	Clinicians can securely video call other clinicians with the iConsult app.
<b>Virtual visitation</b>	Patients can invite family and friends to a secure video call by simply adding a cell phone number or email address. Invitees just click the link in the SMS or email to start video instantly.
<b>Add participants, with no app required</b>	All workflows have the ability to invite additional participants to a video call which is helpful for specialty consults, interpreters and patient-family conferences in addition to remote multi-disciplinary rounds.
<b>Analytics</b>	Dashboards provide near-time insight into iConsult Bedside utilization and trends at a unit, hospital and organizational level.
<b>Extensible</b>	iConsult is part of Caregility's UHE Virtual Care platform. Customers can opt to extend the solution to cover additional care settings or workflows such as continuous patient observation.
